What future are we
shaping with technology?

Mum's the word

...Probably one of the most important threat, and not only at home...

Benoit - France

Annoying to have to go that way, but a positive outcome for families if they can protect their privacy and spend less time with electronics and screens.

Flemming - Denmark

Nothing used to be more private than our homes. It provided the necessary shelter and protection for the outside world, allowing us to develop our private selves, dreaming away in peace far from the ever growing public world. With billions of smartphones, vocal assistants and connected devices, our homes are now potentially widely public places. Due to malicious creepware, or being listened by our "normal" services, we are individually and collectively deeply concerned. "0 Privacy" is starting to be our default mode. Trust has faded away, ethics is theoretical, legislation is slow to evolve. No one can be guaranteed true privacy. Electronic devices are being banned from boardrooms or government facilities, soon from parts of our homes. To preserve ourselves, we are being forced into organizing real world incognito mode, privacy oasis and securing explicit times for full disconnection. One of our greatest fear might well end up being extremely positive, socially reconnecting us on the physical space, away from screens.

#TechforPeople

#People

In a world where every hardware component could host a virus that spies on us, families have electronic-free safe rooms in their homes to preserve their privacy.

We believe this will be normal...

Impact on our society

Impact on our daily life

Devotopias survey was lead by Devoteam from October, 21st 2019 to December, 18th 2019. 900 people responded on an international scope - mainly European - including 69% of Devoteam employees, 66% men and 34% women.
