# Don't be evil

Without being SuperHumans, "nowaday" Humans already are the greatest risk for humanity and earth...

Justine - Luxembourg

Depends if SuperHumans are used for society's benefits or not...

Solen - France

Computers and Humans are on parallel track to a "Super" status. AI is extending computers' abilities to be able soon to cope with highly complex cognitive tasks. At the same time a new breed of technologies is moving fast forward to extend humans' physical and mental limitations. We might be only a few decades away from a unique dual point of singularity, when both computers and humans will have broken away from their current states. Sounds explicitly negative. "Super" anything looks dangerous.

With super capacities comes super responsibilities. The responsibility for SuperComputers to protect us from ourselves, to control or nudge our actions when we are failing to be logical or meaningful. The responsibility for SuperHumans to design and build for good, to ease our life and protect the world where we live.

We are the one building both those two potential new species. This gives us today the responsibility to decide if we want them to be SuperMe, individual clones taking decisions the way each of us would have, or SuperUs taking decision on behalf of each of us for the benefit of all

#TechforPeople

## devotopias.

What future are we  
shaping with technology?

### #People

In a world of super intelligence, SuperHumans are the greatest risk to humanity, not SuperComputers.

### We believe this will be normal...

### Impact on our society

### Impact on our daily life

Devotopias survey was lead by Devoteam from October, 21st 2019 to December, 18th 2019. 900 people responded on an international scope - mainly European - including 69% of Devoteam employees, 66% men and 34% women.
