What future are we
shaping with technology?

Zero Risk

A world where there is no risk to take the road, is a sad world where the road doesn't represent adventure any-more. No risk, no dream.

Michael - Luxembourg

I really enjoy driving by myself. But connected commute system and autonomous driving are the future for safety and improved travel time.

Ana - Belgium

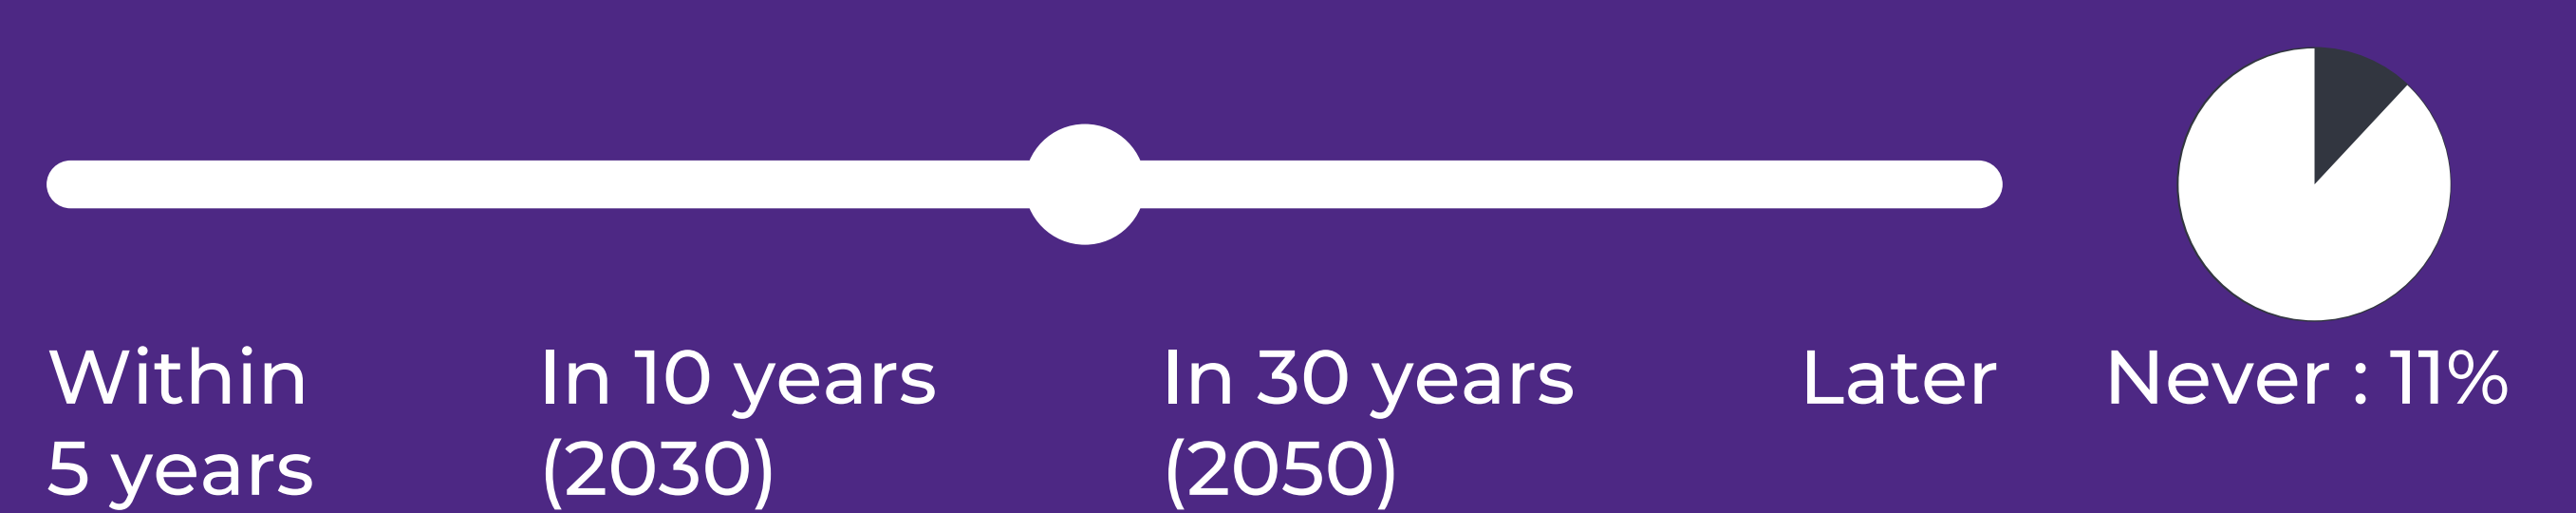

In less than 5 years, autonomous driving has moved from “maybe possible” to “most certainly a reality”. All car manufacturers have launched programs, new market players are emerging, legislations are being defined and adapted. Millions of kilometers have been driven in real traffic conditions with positive success. It's not only about potentially less (no) accidents, but also optimising travel time, and drastically moving from owning a car to paying for mobility services. We will adapt and change our usage of public transportation, working during trip, even accepting longer distance home-work and flexible working hours. Positive outlooks, freeing us from daily constraints and providing a total peace of mind. We look ready to trade security and comfort for less freedom and much less fun, removing all the joy and excitement of driving. We will have to look to other alternatives to keep ourselves dreaming of adventures and challenges, taking risks, making mistakes, learning from them, preserving the ability of humanity to constantly progress.

#People

In a world where the number of road accidents is down to zero as a result of autonomous driving, people wonder why we ever took the risk of driving ourselves.

We believe this will be **normal**...

Impact on **our society**

Impact on **our daily life**

#TechforPeople

Devotopias survey was lead by Devoteam from October, 21st 2019 to December, 18th 2019. 900 people responded on an international scope - mainly European - including 69% of Devoteam employees, 66% men and 34% women.
